Convenient Road Districts. The county court has contemplated

for some time a different policy than has heretofore been pursued in the matter of road working in Gentry county. As is generally known, the public roads of this county are not only very expensive to tax-payers, but burdensome to be court records. Formerly a road werseer was appointed for each school fistrict, and later, districts were made hree miles square. While this increase n the size of the districts proved advanageous in some respects, and resulted in saving many dollars of the county's money, it is still unsatisfactory to the court. At the last term the question was fully discussed, and it was determined to postpone the appointment of overseers until the next term, when it is expected the c urt will re-district the

county. Their authority for so doing, is found in the following section of law: Sec 11, Laws of 1883: The several county court shall divide their counties into convenient road districts, and shall appoint a road overseer for districts, and furnish him with the boundaries thereof, and at the February term of of the leading events in the career of the Human Race from the begin-ning of civilization to the present time. oppoint a suitable person in each road district to act as road overseer for the next ensuing year: provided, however, that a majority of the tax-payers of any road district shall have the right b etition the county court, in writing for he appointment of any tax-payer resid ing in such district, on or February term of the court, and upon such petition being presented to the court, it shall be the duty of the court to appoint such person overseer of such district, etc.

By virtue of the authority invested in the court, it continued the February term until the third Monday in March, when the matter will be disposed of. It is argued that, if the road districts are nade six miles square, as contemplated the territory of their jurisdiction will be sufficiently large to justify good oversters in devoting their attention and time to the work of keeping the road in repair. At the present time there are 56 road districts in the county, and it is roughly estimated that each overseer draws at least \$50 for everseeing. It will be seen that the sum of \$2,800 is paid annually for road overseeing, leaving out the large amounts allowed for timber, lumber, etc. If the county is provided with one overseer for every district of six miles square, there will be but 14 overseers, and the estimated sum of \$2,800, as above would allow each overseer \$200 as a remnneration for his time. The best feature of the new scheme is that competent men will be induced to give the road work their attention. It is a matter of great importance to the tax-payers, and they should aid the court m its effort to cut down the counties expenses, and at the same time improve the road-working system. This can be done by petitioning for honest, capable men for their overseers -Albany Ledger.

Gentle w. man is so often the victim t sick headache that she buils as the dawn of a new era, the introduction of a medicine that is guaranteed as a sure cure. Mrs. Morris Tanner, of Hobos ken, N. To keep your lamp chimneys from cracking, place your tumblers, chimneys or vessels which you desire to keep from cracking on a pot filled with cold water, add a little cooking salt, allow the mixture to boil well over a fire, and then cool slowly. Glass treated in this way i- said not to crack eyen if exposed to very sudden change of te operature. Chimneys are said to become very durable by this process, which may also be extended to crockery, stoacware, porce lain, etc. The process is simply one of annealing, and the slower it is, especially the cooling portion of it, the more effective will be the work.
